

Experimental Design Graphic Organizer

Name(s): _____

<u>What is your research question:</u>		<u>Will this study compare two things or show the relationship between two things? Explain.</u>	
<u>What is your Independent Variable (IV)?</u>		<u>What is your Dependent Variable (DV)?</u>	
Independent Variable Part of the experiment changed by the experimenter	Dependent Variable Part of the experiment that changes because of the IV- is measured or observed to get data	Constant Parts of the experiment that remain the same to prevent affecting the experiment's outcomes	Control Level of the IV that you compare back to- unchanged or in the natural state
<u>What can affect the DV?</u>		<u>How will I manage the effect of these?</u>	
_____ →	_____		
_____ →	_____		
_____ →	_____		
_____ →	_____		
_____ →	_____		
_____ →	_____		
<u>Describe your Experimental Group (The group exposed to the IV):</u>			
<u>Describe your Control Group/Variable</u> (The group that gets no treatment/no exposure to the IV- This should help to show that any changes in the DV or measurements were due to changes in the IV or other manipulations):			

<u>What am I measuring or observing?</u>	<u>Units?</u>	<u>When will I measure?</u>	<u>What formula might I use?</u>
DV: _____	_____	_____	_____
IV: _____	_____	_____	_____
Hypothesis (What do you think the outcome will be?):			
If [I.V.] _____,			
Then [D.V.] _____.			
<u>What has previous research found or concluded regarding your question?</u>			
How will data look if I am correct? _____			
How will data look if I am wrong? _____			

<u>What are some things to keep in mind that could go wrong in this experiment?</u>	How can I prevent or deal with these problems?

Results:

When (I.V.) _____,

Then (D.V.) _____.

Experimental Checklist: Complete the checklist below

Using your graphic organizer:

- Perceive the question/generate research idea
- Form an EDUCATED hypothesis; be sure to look for previous research conducted regarding your question?
- Design a method to collect data and test your hypothesis
- Make a timeline or list showing the events in your experiment including:
 - Procedures (specific)
 - Supplies needed
 - Assigning of roles
 - Factors to be controlled
 - Data collection and analysis
 - Presentation of Data/ Create an organized data table/chart/graph
- Complete the experiment.
- Writing of Report
 - Write a clear step-by-step procedure that can be repeated
 - See handout on specific of report writing

NOTES
